Marx's Economic Theory

The Power of Discovery

"Outside his specific economic theories, Marx's main contribution to the social sciences has been his theory of historical materialism. Its starting point is anthropological. Human beings cannot survive without social organisation."

Review

- General approach and influence
- Marx's Labour Theory of Value
- Marx's Theory of Rent
- Marx's Theory of Money
- Marx's Theory of Surplus Value
- The Laws of Motion of the Capitalist Mode of Production
- Marx's Theory of Crises
- Marx and Engels on the Economy of Post-Capitalist Societies

General approach and influence

- A general appraisal of Marx's method of economic analysis is called for prior to an outline of his main economic theories (theses and hypotheses). Marx is distinct from most important economists of the 19th and 20th centuries in that he does not consider himself at all an 'economist' pure and simple.

- 
- Socialism is an economic system based upon conscious planning of production by associated producers (nowhere does Marx say: by the state), made possible by the abolition of private property of the means of production.
 - But overall economic organisation in a postcapitalist society will pass through two stages.

- 
- In the first stage, generally called 'socialism', there will be relative scarcity of a number of consumer goods (and services), making it necessary to measure exactly distribution based on the actual labour inputs of each individual (Marx nowhere refers to different quantities and qualities of labour; Engels explicitly rejects the idea that an architect, because he has more skill, should consume more than a manual labourer). Likewise, there will still be the need to use incentives for getting people to work in general. This will be based upon strict equality of access for all trades and professions to consumption. But as human needs are unequal, that formal equality masks the survival of real inequality

- 
- In a second phase, generally called 'communism', there will be plenty, i.e. output will reach a saturation point of needs covered by material goods. Under these circumstances, any form of precise measurement of consumption (distribution) will wither away. The principle of full needs satisfaction covering all different needs of different individuals will prevail. **No incentive will be needed any more to induce people to work.** 'Labour' will have transformed itself into meaningful many-fold activity, making possible all-round development of each individual's human personality. The division of labour between manual and intellectual labour, the separation of town and countryside, will wither away. Humankind will be organised into a free federation of producers' and consumers' communes.

Implication of the Model

- Revolution will occur in most advanced (i.e., ripest) capitalist economy
 - Germany
 - UK
- Did it? NO
- Revolution occurs in Russia
 - hardly a mature capitalist economy
