

# 《 程序设计 I 》期末考试试题答案(A)

任课教师：吴维刚，刘聪，林瀚

考试形式：闭卷 考试时间：2 小时

## 1. DCDA DCABC BCDBD BCCDC

2.

3)	<code>int sum;</code>	<code>int sum=0;</code>
7)	<code>value = -1</code>	<code>value == -1</code>
9)	<code>1&lt;=value&lt;=100</code>	<code>value&lt;=100&amp;&amp;value&gt;=1</code>
14)	<code>int sum</code>	<code>sum</code>

5)	<code>list[j] = list[i];</code>	<code>list[j] = temp;</code>
7)	<code>return 0;</code>	<code>No return.</code>
10)	<code>int SIZE = 8;</code>	<code>int const SIZE</code>
13)	<code>*(myList++) = i;</code>	<code>myList[i-1] 或者*(myList+i-1)</code>
14)	<code>myList[]</code>	<code>myList</code>
15)	<code>i &lt;= SIZE</code>	<code>i &lt; SIZE</code>

3.

(1)	(2)	(3)	(4)
6 24 78 240	3 6 36	405 333 72	this whatIsUp thisIsAString

4.

(1)

```
findMax
int array[]
return array[0]
findMax(array, length - 1)
8
```

(2)

```
strlen(array) - n
p, array + i, n
p[n] = 0
delete [] p
return max;
```

5.

(1)

```
#include <iostream>
#include <cstring>
using namespace std;

bool contains(char array[], char c) {
    int length = strlen(array);
    for (int i = 0; i < length; ++ i) {
        if (c == array[i]) return true;
    }
    return false;
}

void split(char array[], char set[], char * lines[]) {
    int length = strlen(array);
    int count = 0;
    bool toAdd = true;
    for (int i = 0; i < length; ++ i) {
        if (contains(set, array[i])) {
            array[i] = 0;
            toAdd = true;
        }
        else if (toAdd) {
            lines[count] = array + i;
            toAdd = false;
            ++ count;
        }
    }
    lines[count] = 0;
}

int main() {
    char array[100];
    char set[100];
    char * lines[100];
    cin >> array;
    cin >> set;
    split(array, set, lines);
    for (int i = 0; ; ++ i) {
        if (lines[i] == 0) break;
        cout << lines[i] << endl;
    }
}
```

(2) Retain each character once.

```
#include <iostream>
#include <cstring>
using namespace std;

bool contains(char array[], char c) {
    int length = strlen(array);
    for (int i = 0; i < length; ++ i) {
        if (c == array[i]) return true;
    }
    return false;
}

void add(char array[], char c) {
    if (contains(array, c)) return;
    int length = strlen(array);
    array[length] = c;
    array[length + 1] = 0;
}

int main() {
    char array[100];
    char set[100];
    cin >> array;
    set[0] = 0;
    int length = strlen(array);
    for (int i = 0; i < length; ++ i) {
        if (contains(set, array[i])) continue;
        add(set, array[i]);
        cout << array[i];
    }
}
```
