P.225.4. 设年的四边形 ABCD 对南线的交色为M, O为空间设置 20014—106. 一点, 证明: 可一一位对中部+0元+0元

$$\overrightarrow{i2}: \overrightarrow{OM} = \overrightarrow{OA} + \overrightarrow{AM} , \overrightarrow{AM} = \frac{1}{2}(\overrightarrow{AD} + \overrightarrow{AB})$$

$$= \overrightarrow{OB} + \overrightarrow{BM} , \overrightarrow{BM} = \frac{1}{2}(\overrightarrow{AD} - \overrightarrow{AB})$$

$$= \overrightarrow{OC} + \overrightarrow{CM} , \overrightarrow{CM} = -\overrightarrow{AM} = -\frac{1}{2}\overrightarrow{AD} - \frac{1}{2}\overrightarrow{AB}$$

$$= \overrightarrow{OD} + \overrightarrow{DM} , \overrightarrow{DM} = -\overrightarrow{BM} = -\frac{1}{2}(\overrightarrow{AD} - \overrightarrow{AB})$$

$$\overrightarrow{AM} + \overrightarrow{BM} + \overrightarrow{CM} + \overrightarrow{DM} = 0$$

$$4 \overrightarrow{OM} = \overrightarrow{OA} + \overrightarrow{OB} + \overrightarrow{OC} + \overrightarrow{COD}$$

$$\overrightarrow{OM} = \frac{1}{4}(\overrightarrow{OA} + \overrightarrow{OB} + \overrightarrow{OC} + \overrightarrow{COD})$$

P.225.6.利用何量证明:三南形面边中点的连续行了第边,其长度等了第边建。

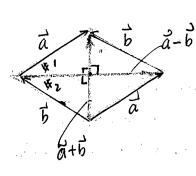

$$\overrightarrow{EF} = \overrightarrow{EB} + \overrightarrow{13F}$$

$$= \frac{1}{2}(\overrightarrow{AB}) + \frac{1}{2}(\overrightarrow{BC})$$

$$= \frac{1}{2}(\overrightarrow{AB} + \overrightarrow{BC}) = \frac{1}{2}\overrightarrow{AC}$$

$$\overrightarrow{AP} = \overrightarrow{EF} \parallel \overrightarrow{AC}, \quad |\overrightarrow{EF}| = \frac{1}{2}|\overrightarrow{AC}|.$$

P.226.7利同何童论则。 (1) 菱形的对角线互相重直,且许多较角。

(2) 用价量证明与股产理。

$$\frac{1}{4m^{2}}$$
 $\vec{c} = \vec{a} + \vec{b}, \quad \vec{a} + \vec{b}$ 

$$\frac{1}{1} \vec{c} = (\vec{a} + \vec{b}) \cdot (\vec{a} + \vec{b}) = \vec{a} \cdot \vec{a} + \vec{b} \cdot \vec{a} + \vec{a} \cdot \vec{b} + \vec{b} \cdot \vec{b}$$

$$= |\vec{a}|^{2} + |\vec{b}|^{2}$$

$$\vec{c} = \sqrt{|\vec{a}|^{2} + |\vec{b}|^{2}} \quad \vec{c} = \sqrt{14}$$
